DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a prostatic stent, classified in class 623, subclass 23.66.
- II. Claims 10-19, drawn to a catheter-stent system and method, classified in class 623, subclass 1.11.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the stent-catheter system does not require a retaining member. The subcombination has separate utility such as being delivered or implanted via an inflatable balloon instead of using a releasably coupled connecting segment to deliver the stent.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Prostatic stents and retaining devices

Species I: Fig. 3.

Species IV: Fig. 6.

→ Species II: Fig. 4.

Species V: Figs. 10-12.

Species III: Fig. 5.

Species VI: Fig. 17.

Species VII: Fig. 26 (distal end of stent w/ retaining device)

Species VIII: Fig. 27 (distal end of stent w/ retaining device)

Species IX: Fig. 28 (distal end of stent w/ retaining device)

Stent-catheter systems

→ Species A: Figs. 1,2.

Species B: Fig. 16.

Pushing rod

→ Species 1) Fig.7.

→ Species 2) Fig. 8.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from each group of species listed for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and *a listing of all claims readable thereon*, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
